

## NEW! TeachLogic SP-628L 1' x 2' Lay-In Speaker

There were a lot of requests over the past year for a super-easy-to-install lay-in ceiling speaker. We also know that there are many bad-to-awful-quality lay-in speakers being used on many jobs in the field.

We want to give lay-in speakers a good name!

The real advantage of a lay-in ceiling speaker is the amount of labor that is saved. With our SP-628L, you simply make 1 straight cut across the ceiling tile.....no "dog ears" to adjust, no separate tile bridge to mount, no T-bar to attach. Just connect the wires and you're done!

Our new SP-628L lay-in speaker utilizes the same exact SP-628 coaxial speaker we have been using for several years. This speaker has a real tweeter (no paper whiz cone) to give excellent wide dispersion in the 2-8kHz range. Don't forget, that it's in the 2-8kHz range where all the consonant information resides and that is where we receive 75% of our verbal learning.

What a nice clean look!

These new lay-in speakers are sold individually as model SP-628L, as a model LS-2 package of (2) units with plenum cable, or as a model LS-4 package of (4) units with plenum cable.

On an individual basis, the SP-628L is \$22 more than the standard “round hole” SP-628 ceiling speaker (which is supplied with a separate tile bridge), but the time/labor savings should more than equal the \$22 cost difference.

**NOW IN STOCK!**
